## AP Physics - Love That Homework - 1

125

Who you are
Per $\qquad$

This 'telephone' has too many shortcomings to be seriously considered as a means of communication. The device is inherently of no value to us." -- Western Union internal memo.

1. Give an example of two cars that have the same speed but different velocities.
2. You are driving down the road at a constant velocity. What are 3 ways you could safely change your velocity?
3. You nose out another runner to win the 100.000 m dash. If your total time for the race was 11.800 s and you aced out the other runner by 0.001 s , by how many meters did you win?
4. The speed of sound is $344 \mathrm{~m} / \mathrm{s}$. You see a flash of lightning and then hear the thunder 1.5 seconds later. How far away from the lightning strike are you?
5. A train travels from Denver to Bougainvillea in 5 hours and 37 minutes. If the average speed for the train was $76.5 \mathrm{~km} / \mathrm{h}$, how much distance did it cover?
6. You travel down the highway, starting from rest. You travel for 2.0 h at a speed of $105 \mathrm{~km} / \mathrm{h}$. Then you stop and eat your lunch for 30.0 min . Then you travel for 1.5 h at 75 km h . Make a distance vs time graph of this motion.
7. A car travels along a straight section of road. A distance vs time graph illustrating its motion is graphed to the right.
(a) Indicate every time $\boldsymbol{t}$ for which the cart is at rest.
(b) Indicate every time interval for which the speed of the cart is increasing.
(c) What is the velocity from: $\mathrm{a}-\mathrm{b}, \mathrm{b}-\mathrm{c} . \mathrm{c}-\mathrm{d}, \mathrm{d}-\mathrm{e}$, and $\mathrm{e}-\mathrm{f}$ ?
